

# EDCON-COMPONENTS

## SPECIFICATION:

Rated Voltage:	250VAC
Rated Current:	5A
Contact Resistance:	≤ 100mΩ / DC500V
Operating Force:	45gr +/- 20gr
Resilience:	RF
Free Position:(FP)	15,5 ± 1,0mm
Action Position:(OP)	13,5 ± 1,0mm
Return Position (RP)	
Stroke:	PT
Sensitivity:	BT
Mechanical:	
Mechanical Life:	1.000.000 cycles, 2,5 Welding Process Manual Welding
Electrical Life:	10.000 cycles
Applicable Temperature:	.-25°C + 85°C
Insulation Resistance:	≥100MΩ DC500V Applicable Humidity <85% RH
Withstanding Voltage:	AC 1000V 1 minute

## Technical Description

The test sample is installed in the dustproof box at the normal use position, and the test is carried out according to the second type of enclosure in GB4208-1993 (the pressure of the switch cavity is the same as the surrounding atmospheric pressure); the test should last for 8 hours, during which the switch should be turned on for 1 hour. Rated current and power-off for 1h; after the test, under the condition of ambient air temperature (25±10°C), turn on the switch with rated current 5A 250VAC for temperature rise test

Take out the sample after 240h aging test in a heating box with an ambient temperature of (70±2°C) immediately, and place it in a temperature of (25±10°C) for at least 16h before conducting a waterproof test; clean water and test used in the test When the sample temperature difference is not more than 5K (no electricity during the test).

GB4208-1993/IEC60529-1989 "Enclosure Protection Grade" GB15092.1-2003/IEC61058-1:1996 "Appliance Switch Part 1: General Requirements" Environmental conditions: temperature range 15°C-35°C; relative humidity 25%-75%.

After the test, the switch should meet the following requirements: the sealing rubber cap and the switch body must not be deformed, damaged, hardened and other aging phenomena; there should be no water marks on the plastic parts of the switch that reduce the creepage distance and electrical clearance below the standard value; between the terminals And the terminal and the outer surface of the shell withstand voltage strength ≥1000V

After the test, the switch should meet:

1. The action is normal;
2. Temperature rise test ≤50K;
3. Withstand voltage strength between the terminals and between the terminals and the outer surface of the shell ≥1000V
