# DATA SHEET

## **Super High Voltage Disc Ceramic Capacitor**

## Serie: I23006

**Range** 221= 220pf

Voltage 15000 Volt

Body Diam. 10,5mm

Body Thickn. 10,0mm

**Tolerance** K= ±10%

Material Character. 5P

Pitch 10mm

Super High Voltage Dice

#### Features

Wide rated Voltage range, wide nominal capacitance range Flame retardent, insulating coating applied **Recomended Application** Filter circuit of high voltage power

High voltage circuit of television set and monitor

High voltage circuit of various electronic equipment

| Bending                         | The capacitor is held in such a manner so that axis of the lead is vertical. As mass applying a force of 5N (for Ø 0,6mm lead ) or 2,5N (for Ø 0,5mm lead) is then suspended from the end of the lead. The body of the capacitor is then inclined within a period of 2 to 3 seconds, through an angle of approximately 90° in the vertical plane and then returned to its initial position over the same period of time. This operation constitutes one bend. The lead shall be subjected to a total of 2 alternating bends in to opposite directions. | The lead shall be no broken.                   |  |  |  |  |

Rated Voltage

When rated voltage is 50V the voltage marking is symbol "\_\_\_\_" under capcitance marking.

When rated voltage is 500V the voltage marking is symbol "\_\_" over capcitance marking.

When rated voltage is 1000Vor over, the voltage marking is symbols 1KV, 2KV, 3KV, 6KV..... over capacitance marking.
