Technical Dimensions

1. All Dimensions are in mm.
2. Lead Spacing in measurement where the lead emerges from the package
3. Protruded resin under flange is 1,5mm max.
4. Tolerances are 0,3mm unless otherwise noted.
5. Specifications are subject to change without notice
6. Driving LED without heat sinking device is forbidden
7. Warps the degree 0,5mm
8. LEDs are not designed to be driven in reverse bias.
9. Proper current derating must be observed to maintain junction temperature below the maximum
10. It is strongly recommended that the temperature of lead be not higher than 55°C.

EDCON-COMPONENTS

Features

- Long operating life
- Instant Light
- Superior ESD defense
- Low Voltage DC operated
- Color bright saturated
- More energy efficient than incandescent and most halogen lamps

Discription

EDCON-COMPONENTS High Power LED is make of hi-eff AS/TS GaInN chips with precide package technique which makes excellent heat dissipation to reach the advantages of high lunious efficiency, low decay, and long endurance. Now we have these colors available RED, GREEN, BLU, YELLOW, WHITE.

Typical Applications

- Decoration Lights
- Beacon light
- Bathrooms Light
- Medical applications
- Architectural detail lighting

Absolute Maximum Ratings

Parameter	Symbol	Max. Rating	Unit
Continuous Forward Current	IF	1750	mA
Peak Forward Current *1	IFM	2000	mA
Electrostatic Discharge (HBM)	ESD	4000	V
LED Junction Temperature	Tj	G / B	135
		R / Y	125
Operating Temperature	Topr	-40 ~ +110	°C
Storage Temperature	Tstg	-40 ~ +120	°C

Manual Soldering Temperature 260°C for 5seconds max . 2

TA=25°C

*1 Duty Ration = 00,1%, Pulse Width=10us.

*2 Iron soldering high temperature will not cause damage to the dice. But be aware of the high temperature will make the epoxy soften and the gold wire broken and even open. So before returning to the normal temperatures please avoid any serious pressure on the top of epoxy and lead.

*3. We suggest using PWM (Pulse Width Modulation) for driving.

*4 It is recommended to use series as there are several 3pcs. If there are more than 5pcs, please use product with higher power.

Operating Instructions

It is important to keep away the product from the water, in order to avoid the product electronic characteristics to be harmful

Above 150°C

There is 150°C directly from the front of Power LED emitting diode. It is untouchable to prevent burning.

It should be noticed whether there is convection in design of device. Convection has to exist.

The material in the central top of POWER LED is soft. Therefore, it is un squeezable and untouchable.

Keep Insulation

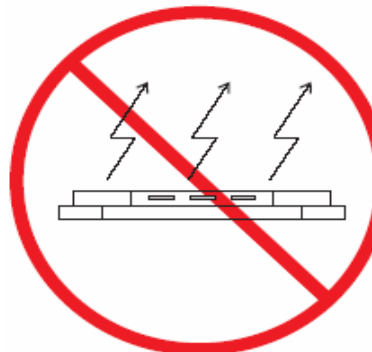

Power Supply

In the button of heat sink cannot be touched with neither positive nor negative pole. (Heat sink has to be insulation)

When making use of products, it is necessary to use anti ESD devices to prevent destructive electronic characteristics.

The product should not be light up directly without heat dissipation device
