- 2. Lead Spacing in measuremend whre the lead emerge from the package
- 3. Prodruded resin under flange is 1,5mm max.
- 4. Tolerance are 0,3mm unless otherwise noted.
- 5. Specifications are subject to change without notice
- 6. Driving LED without heat sinking device is forbidden
- 7. Warps the degree 0,5mm
- 8. Leds are not designed must to be driven in reverse bias.
- 9. Proper current derating must be observed to maintain junction temperature below the maximum
- 10. It is strongly recommended that the temperature of lead be not higher than 55°C.

EACH

Features

Long operating life Instant Light Superior ESD defense Low Voltage DC operated Color bright satured More energy efficient than incandescent and most halogen lamps

EDCON-COMPONENTS High Power LED is make of hi-eff AS/TS GalnN chips with precide package technique which makes excellent heat dissipation to reach the advantages of high lunious efficiency, low decay, and long endurance. Now we have these colors available RED, GREEN, BLU, YELLOW, WHITE.

**Typical Applications** 

**Decoration Lights** Beacon light Bathrooms Light Medical applications Architectural detail lighting

### **Absolute Maximum Ratings**

| Parameter                     | Symbol | Max.      | Rating | Unit |
|-------------------------------|--------|-----------|--------|------|
| Continuous Forward Current    | IF     | 17        | 1750   |      |
| Peak Forward Current *1       | IFM    | 2000      |        | mA   |
| Electrostatic Discahrge (HBM) | ESD    | 4000      |        | V    |
| LED Juntion Temperature       | Ti     | G/B       | 135    | C    |
|                               | ij     | R/Y       | 125    | C    |
| Operating Temperature         | Topr   | 40 ~ +110 |        | C    |
| Storage Temperature           | Tstg   | 40 ~ +120 |        | C    |

Manual Soldering Temperature 260°C for 5seconds max . 2

#### TA=25℃

\*1 Duty Ration = 00,1%, Pulse Width=10us.

\*2 Iron soldering high temperature will not cause damage to the dice. But be aware of the high temperature will make the epoxy soften and the gold wire broken and even open. So before returning to the normal temperatures please avoid any serious pressure on the top of epoxy and lead.

\*3. We suggest using PWM (Pulse Width Modulation) for driving.

\*4 It is recommended to use series as there are several 3pcs. If there are more than 5pcs, please use product with higher power.

| Blue   | 185,000                         |  |  |  |  |  |  |  |  |

TAB in this table is according to highest operating temperature 65°C

Different materials of second heat dissipation device, the surface area of heat sink will be different. Thus, this document is for reference only.

50Watt High Power LED

**Operating Instructions** 

COMPONENTS A MEMBER OF EDCON-GROUP

It is important to keep away thre product from the water, in order to avoid the product electronic characteristics to be harmful

When making use of products, it is necessary to use anti ESD devices to prevent destructive electronic characteristics.

www.edcon-components.com

Jason

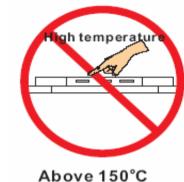

Schumi

CHKD

Wilson

DRW:

APPD:

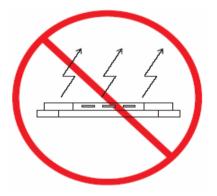

There is 150°C directly from the front of Power LED emitting diode. It is untouchable to prevent burning.

MATL:

FINISH

It is should be noticed whether there is convection in design of device. Convection has to exist.

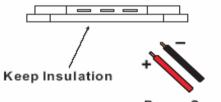

The product should not be light up directly without heat dissipation device

Mason

Sheet No.

The material in the central top of POWER LED is soft. Therefore, it is unsqueenzable and untouchable.

Power Supply

In the button of heat sink cannot be touched with neither positve nor negative pole. (Heat sink has to be insulation)

#### TAB Temperature LIFE Characteristics Curve

Board Ambient Temperature (°C)

Board Ambient Temperature Tolerance 5℃

TAB in this table is according to highest operating temperature 65°C

The TAB is the stable testing value for the product lighted 100% after one hour

Different materials of second heat dissipation device, the surface area of heat sink will be different, Thus, this document is for reference only.
