

EDCON-COMPONENTS

The Power of LED Light

Typical Electrical & Optical Characteristics (IF=150mA and Ta=25°C)

Part-No.	Dominant Wavelength (nm) or CCT(K)		Forward Voltage (V)		Luminous Flux (lm)		Reverse Current (μA)	50% Power Angle
	Min	Typ	Min	Max	Min	Typ		
M11E7005	620	630	2.5	3.0	15	20	10	120

1. Tolerance of measurement of luminous flux : +/-15%
2. Tolerance of measurement of dominant Wavelength : +/-1nm
3. Tolerance of measurement of CCT (Correlated color temperature +/- 200K
4. Tolerance of measurement of forward voltage +/-0,1V

Technical Dimensions

Features

- Highest Luminous Flux
- Long Lifetime Operation
- Super Energy Efficiency
- Superior UV Resistance
- Superior ESD protection

Absolut Maximum Ratings (Ta=25°C)

Items	Symbols	Absolut maximum Rating	Unit
		Red	
Power Dissipation	Pd	600	mW
Forward Current	If	200	mA
Peak Forward Current	Ifp	250	mA
Reverse Voltage	Vr	5	V
LED Junction Temperature	Tj	---	°C
Operating Temperature	Topr	-30°C ~ +85°C	°C
Storage Temperature	Tstg	-40°C ~ +100°C	°C

* Pulse width ≤ 0,1msec duty ≤ 1/10

Tops Power LED

EDCON-COMPONENTS

The Power of LED Light

Handling Informations

- The outer diameter of the TOP LED pickup nozzle should not exceed the size of the LED to prevent air leaks. The inner diameter of the nozzle should be as large as possible.
- A pliable material is suggested for the nozzle tip to avoid scratching or damaging the LED surface during pickup.
- The dimensions of the component must be accurately programmed in the pick-and-place machine to insure precise pickup and avoid damage during production.

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force. As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

- Handle the component along the side surfaces by using forceps or appropriate tools

- Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry.

- Do not stack together assembled PCBs containing exposed LEDs. Outside impact may scratch the silicone lens or damage the internal circuitry.

EDCON-COMPONENTS

The Power of LED Light

Moisture Proof Packing

In Order to prevent moisture absorption into DIAMOND = TOP LED / XEON POWER during the transportation and storage. DIAMOND TOP-LED / XEON-POWER LED is packed in a moisture barrier bag. Desiccants and humidity indicator are packed together with DIAMOND TOP-LED / XEON-POWER LED as the secondary protection. The indication of humidity card provides the information of humidity within TOP Packing.

Storage

Shelf life in original sealed bag in storage condition of <math><40^{\circ}\text{C}</math> and 90% RH is 12 months. Baking is required whenever shelf life is expired. Before opening the packaging please check whether bag leak air or not. After opening the DIAMOND TOP-LED / XEON POWER LED must be stored under the condition <math><30^{\circ}\text{C}</math> and 60% RH. Under this condition DIAMOND TOP-LED / XEON POWER LED must be used (subject to reflow) within 24-hours after bag opening, and re-baking is required when exceeding 24 hours. For baking, place DIAMOND TOP-LED / XEON POWER LED in oven at temperature $75^{\circ}\text{C} \pm 5^{\circ}\text{C}$ and relative humidity <math><10\% \text{RH}</math>, for 24 hours. Take out the material from packaging bag for re-bake. Do not open the door of oven frequently during the baking process.

Manual soldering (We do not recommend this method strongly).

No mechanical stress should be exerted on the resin portion of DIAMOND TOP-LED / XEON POWER during soldering.

Handling of DIAMOND TOP-LED / XEON POWER LED should be done when the package has been cooled down to below 40°C or less. This is to prevent the DIAMOND TOP-LED / XEON POWER failures due to the thermal-mechanical stress during handling.

Reflow soldering should not be done more than one time.

No stress should be exerted on the package during soldering.

Electrostatic Discharge and Surge current.

Electrostatic discharge (ESD) or surge current (EOS) may damage LED.

Precautions such as ESD wrist strap, ESD shoe strap or antistatic gloves must be worn whenever handling DIAMOND TOP-LED / XEON POWER LED.

All devices, equipment and machinery must be properly grounded.

It is recommended to perform electrical test to screen out ESD failures in final inspection.

It is important to eliminate the possibility of surge current during circuitry design.

Heat Management

Heat management of DIAMOND TOP-LED / XEON POWER must be taken into consideration during the design stage of DIAMOND TOP-LED / XEON POWER LED application. The current should be de-rated appropriately by referring to the de-rating curve attached on each product specification.
