

General

As the operating frequencies go higher and higher for wireless systems, the demands for connectors with higher frequency limit and quality are increasing. SMA connectors are not designed as precision connectors, not for heavy use, and only for frequencies up to 24 GHz at most. They are widely used in microwave industry mainly because economic considerations, therefore, will be inevitably replaced for any serious applications.

Generally, to avoid the spurious propagation modes in a coaxial connector, its dimensions must be reduced accordingly as the operation frequencies go higher. Also, since a precision connector can not be made with a dielectric other than air, a well-design support bead must be used if necessary. Finally, the effects of the discontinuities in a connector are more pronounced at higher frequencies and need be well compensated during the design. All these demand highly controlled manufacture and assembly. 2.92 mm connectors are designed with thicker outer conductors while maintaining the same size of inner conductors of SMA. This makes them spurious-mode free up to 46 GHz, more reliable for heavy use, and still compatible with SMA. Edcon 2.92 mm series connectors are design and manufactured by highest standards. These include jacks and plugs in various interfaces like direct solder, panel receptacles, and adapters.

We are proud to provide these high-quality connectors with reasonable price and guaranteed fast delivery.

Specifications

<i>Electrical</i>		
Impedance		50 Ω
Frequency Range		0 - 40 GHz
Working Voltage		250 VRMS max.
Dielectric Withstanding Voltage		750 VRMS max.
VSWR	Straight	1.3 max.
	Right Angle	1.5 max.
Contact Resistance	Center Contact	3 mΩ max.
	Outer Contact	2 mΩ max.
Insulator Resistance		5000 MΩ min.
