<sup>1.</sup>Befor the endurance in cycles test, the cell shall be discharged at 3.6mA to a final voltage of 1.0V/cell.

#### 5.3 Humidity

The battery shall not leak during the 14 days which it is submitted to the condition of a temperature of  $33\pm3^{\circ}$ C and a relative humidity of  $80\pm5\%$ .

#### 6. OTHERS

- 6.1 We recommend you to set the cut-off voltage at 1.0V/cell.
- 6.2 If the cut-off voltage is above 1.1V/cell, the battery may be underutilized resulting insufficient use of the available capacity.
- 6.3 If it is below 1.0V/cell,the battery may have discharge or reverse charge to the cell.

#### 7. PRECAUTION

The cells shall be delivered in charged condition. Before testing or using, the cell shall be discharged at  $20\pm5^{\circ}$ C at a constant current of 3.6mA to a final voltage of 1.0V/cell.

- 7.1 Avoid throwing cells into a fire or attempting to disassemble them.
- 7.2 Avoid short circuiting the cells.
- 7.3 Avoid direct solidarity to cells.
- 7.4 Observe correct polarity when connecting.
- 7.5 Do not charge with more than our specified current.
- 7.6 Use cells only within the specified working temperature range.
- 7.7 Store cells in dry and cool place.

<sup>2.</sup> The following endurance test shall then be carried out, in an ambient temperature of  $20^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .
