# **B40089 Ni-MH BUTTON CELL**

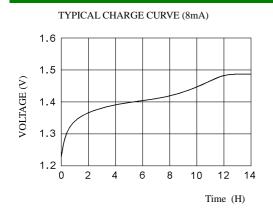

## TECHNICAL DATA

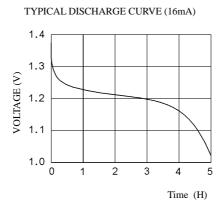

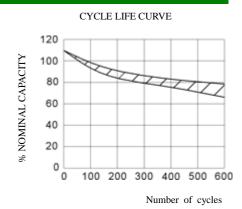

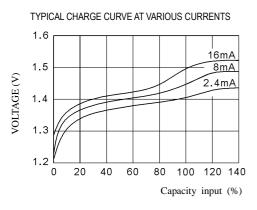

| Model  | Voltage | Capacity | Recommended Trickle Charge Current | Nominal<br>Charge Current | Normal<br>Charging Time | Nominal Discharge Current | Weight |
|--------|---------|----------|------------------------------------|---------------------------|-------------------------|---------------------------|--------|
| B40089 | 1.2V    | 80mAh    | 2.4~4mA                            | 8mA                       | 14~16h                  | 16mA                      | 3.6g   |

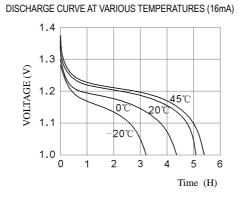

## TECHNICAL CHARACTERISTICS

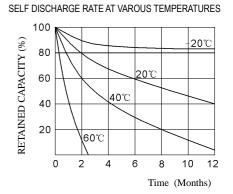

### **TECHNICAL INFORMATION**

#### 1. APPLICATION

This specification applies to the Ni-MH batteries

Model : B40089

- 2. CELL AND TYPE
- 2.1 Cell: Sealed Ni-MH Button Cell
- 2.2 Type : Button type
- 2.3 Size type: 1.2V
- 3. RATINGS
- 3.1 Nominal voltage : 1.2V
- 3.2 Nominal capacity : 80mAh
- 3.3 Typical weight : 3.6g
- 3.4 Standard charge :  $8mA \times 14hours$
- 3.5 Rapid charge : 16mA×6hours
  - Trickle current : 2.4mA
- 3.6 Discharge cut-off voltage: 1.0V
- 3.7 Temperature range for operation (Humidity: Max.85%)
  - Standard charge  $0 \sim +45^{\circ}$ C
  - Rapid charge  $+10 \sim +45^{\circ}$ C
  - Trickle charge  $0 \sim +45^{\circ}$ C
  - Discharge  $-10 \sim +45^{\circ}$ C
- 3.8 Temperature range for storage (Humidity: Max.85%)
  - Within 2 years  $-20 \sim +35^{\circ}\text{C}$
  - Within 6 months  $-20 \sim +45^{\circ}\text{C}$
  - Within a month  $-20 \sim +45^{\circ}\text{C}$
  - Within a week  $-20 \sim +55^{\circ}$ C
- 4. ASSEMBLY & DIMENSIONS

Per attached drawing

- 5. PERFORMANCE
- 5.1 TEST CONDITIONS

The test is carried out with new batteries (within a month after delivery)

ambient conditions

Temperature:  $+25 \pm 5^{\circ}C$ 

Humidity:  $60 \pm 20\%$ 

Note 1

Standard charge :  $8mA \times 14hours$ Standard discharge : 16mA to 1.0V

#### 5.2 TEST METHOD & PERFORMANCE

| Test                | Unit         | Specification  | Conditions               | Remarks        |
|---------------------|--------------|----------------|--------------------------|----------------|
| Consoity            | mAh          | ≥80            | Standard                 | Up to 3 cycles |
| Capacity            | IIIAII       | <i>&gt;</i> 00 | Charge/discharge         | Are allowed    |
| Open Circuit        | Voltage      | ≥1.3           | After 1 hour standard    |                |
| Voltage (OCV)       | (V)          | <i>≥</i> 1.5   | Charge                   |                |
| Internal            | mΩ/cell      | ≤1500          | Upon fully charge        |                |
| Impedance           | III 52 /CeII | ≥1300          | (1KHz)                   |                |
| High rate           | Minute       | >60            | Standard charge          |                |
| Discharge (40 mA)   | Millute      | ≥60            | Before discharge         |                |
| Discharge           | mA           | 40             | Maximum continuous       |                |
| Current             | IIIA         | 40             | Discharge current        |                |
| Over charge         |              | No leakage     | 2.4mA charge             |                |
| Over charge         |              | Not explosion  | one year                 |                |
| Chargo              |              | 64             | Standard charge;         |                |
| Charge<br>Retention | mAh          |                | Storage: 28 days;        |                |
| Retention           |              |                | Standard discharge       |                |
| Cycle Life          | Cycle        | ≥400           | IEC/CEI61951-2:2001. 4.4 |                |
| Lankaga             |              | No leakage nor | Fully charge at 8mA,     |                |
| Leakage             |              | Deformation    | Stand 14 days            |                |

#### Note 2 IEC/CEI61951-2:2001. 4.4 cycle life

| Cycle number | Charge           | Stand in charged Condition | Discharge         |  |
|--------------|------------------|----------------------------|-------------------|--|
| 1            | 8mA for 16h      | None                       | 20mA for 2h20min  |  |
| 2-48         | 20mA for 3h10min | None                       | 20mA for 2h20min  |  |
| 49           | 20mA for 3h10min | None                       | 20mA to 1.0V/cell |  |
| 50           | 8mA for 16h      | 1h to 4h                   | 16mA to 1.0V/cell |  |

<sup>1.</sup>Befor the endurance in cycles test, the cell shall be discharged at 16mA to a final voltage of 1.0V/cell.

#### 5.3 Humidity

The battery shall not leak during the 14 days which it is submitted to the condition of a temperature of  $33\pm3^{\circ}$ C and a relative humidity of  $80\pm5\%$ .

#### 6. OTHERS

- 6.1 We recommend you to set the cut-off voltage at 1.0V/cell.
- 6.2 If the cut-off voltage is above 1.1V/cell, the battery may be underutilized resulting insufficient use of the available capacity.
- 6.3 If it is below 1.0V/cell,the battery may have discharge or reverse charge to the cell.

#### 7. PRECAUTION

The cells shall be delivered in charged condition. Before testing or using, the cell shall be discharged at  $20\pm5^{\circ}$ C at a constant current of 16mA to a final voltage of 1.0V/cell.

- 7.1 Avoid throwing cells into a fire or attempting to disassemble them.
- 7.2 Avoid short circuiting the cells.
- 7.3 Avoid direct solidarity to cells.
- 7.4 Observe correct polarity when connecting.
- 7.5 Do not charge with more than our specified current.
- 7.6 Use cells only within the specified working temperature range.
- 7.7 Store cells in dry and cool place.

<sup>2.</sup> The following endurance test shall then be carried out, in an ambient temperature of  $20^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .
