# **TECHNICAL INFORMATION**

1. APPLICATION

This specification applies to the Ni-MH batteries Model : B40120

- 2. CELL AND TYPE
- 2.1 Cell : Sealed Ni-MH Button Cell
- 2.2 Type : Button type
- 2.3 Size type : 2.4V
- 3. RATINGS
- 3.1 Nominal voltage : 2.4V
- 3.2 Nominal capacity : 230mAh
- 3.3 Typical weight : 21.4g
- 3.4 Standard charge :  $23mA \times 14hours$
- 3.5 Rapid charge :  $46mA \times 6hours$
- Trickle current : 6.9mA
- 3.6 Discharge cut-off voltage: 2.0V
- 3.7 Temperature range for operation (Humidity: Max.85%)

| Standard charge | $0 \sim +45 ^{\circ}\mathrm{C}$ |  |  |
|-----------------|---------------------------------|--|--|
| Rapid charge    | $+10 \sim +45$ °C               |  |  |
| Trickle charge  | $0 \sim +45 ^{\circ}\text{C}$   |  |  |
| Discharge       | -10 ~ +45℃                      |  |  |

- 3.8 Temperature range for storage (Humidity: Max.85%) Within 2 years  $-20 \sim +35$  °C Within 6 months  $-20 \sim +45$  °C
  - Within a month $-20 \sim +45^{\circ}C$ Within a week $-20 \sim +55^{\circ}C$
- 4. ASSEMBLY & DIMENSIONS Per attached drawing
- 5. PERFORMANCE
- 5.1 TEST CONDITIONS

The test is carried out with new batteries (within a month after delivery) ambient conditions

Temperature:  $+25 \pm 5^{\circ}$ C Humidity:  $60 \pm 20\%$ Note 1 Standard charge :  $23\text{mA} \times 14\text{hours}$ Standard discharge : 46mA to 2.0V

#### 5.2 TEST METHOD & PERFORMANCE

| Test               | Unit         | Specification  | Conditions               | Remarks        |
|--------------------|--------------|----------------|--------------------------|----------------|
| Comocity           | mAh          | ≥230           | Standard                 | Up to 3 cycles |
| Capacity           | IIIAII       | ≥230           | Charge/discharge         | Are allowed    |
| Open Circuit       | Voltage      | ≥2.6           | After 1 hour standard    |                |
| Voltage (OCV)      | (V)          |                | Charge                   |                |
| Internal           | mΩ/cell      | ≤800           | Upon fully charge        |                |
| Impedance          | III S2 /Cell | ≪800           | (1KHz)                   |                |
| High rate          | Minute       | >(0)           | Standard charge          |                |
| Discharge (115 mA) | Minute       | $\geq 60$      | Before discharge         |                |
| Discharge          | mA           | 115            | Maximum continuous       |                |
| Current            | IIIA         | 115            | Discharge current        |                |
| Over charge        |              | No leakage     | 6.9mA charge             |                |
| Over charge        |              | Not explosion  | one year                 |                |
| Charge             |              |                | Standard charge;         |                |
| Retention          | mAh          | 184            | Storage: 28 days;        |                |
| Retention          |              |                | Standard discharge       |                |
| Cycle Life         | Cycle        | ≥400           | IEC/CEI61951-2:2001. 4.4 |                |
| Laskaga            |              | No leakage nor | Fully charge at 23mA,    |                |
| Leakage            |              | Deformation    | Stand 14 days            |                |

Note 2 IEC/CEI61951-2:2001. 4.4 cycle life

| Charge             | Stand in charged Condition                               | Discharge  |  |

1. Befor the endurance in cycles test, the cell shall be discharged at 46mA to a final voltage of 1.0V/cell.

2. The following endurance test shall then be carried out, in an ambient temperature of  $20^{\circ}C \pm 5^{\circ}C$ .

5.3 Humidity

The battery shall not leak during the 14 days which it is submitted to the condition of a temperature of  $33\pm3^{\circ}$ C and a relative humidity of  $80\pm5\%$ .

- 6. OTHERS
- 6.1 We recommend you to set the cut-off voltage at 1.0V/cell.
- 6.2 If the cut-off voltage is above 1.1V/cell, the battery may be underutilized resulting insufficient use of the available capacity.
- 6.3 If it is below 1.0V/cell,the battery may have discharge or reverse charge to the cell.

### 7. PRECAUTION

The cells shall be delivered in charged condition. Before testing or using, the cell shall be discharged at  $20\pm5^{\circ}$ °C at a constant current of 46mA to a final voltage of 1.0V/cell.

- 7.1 Avoid throwing cells into a fire or attempting to disassemble them.
- 7.2 Avoid short circuiting the cells.
- 7.3 Avoid direct solidarity to cells.
- 7.4 Observe correct polarity when connecting.
- 7.5 Do not charge with more than our specified current.
- 7.6 Use cells only within the specified working temperature range.
- 7.7 Store cells in dry and cool place.
